

Small component. 99.99995% effect.  
Switch to hygienic compressed air now.

## Small particles – big risk.

Bacteria, fungi and viruses are not just invisible to the human eye – many microorganisms are too small for dental compressed air filter systems to deal with. You can rely on the Dürr Dental virus-bacteria filter to protect you against the risk of contamination. A retention rate of **99.994%\*** was confirmed with **test virus PhiX174**.

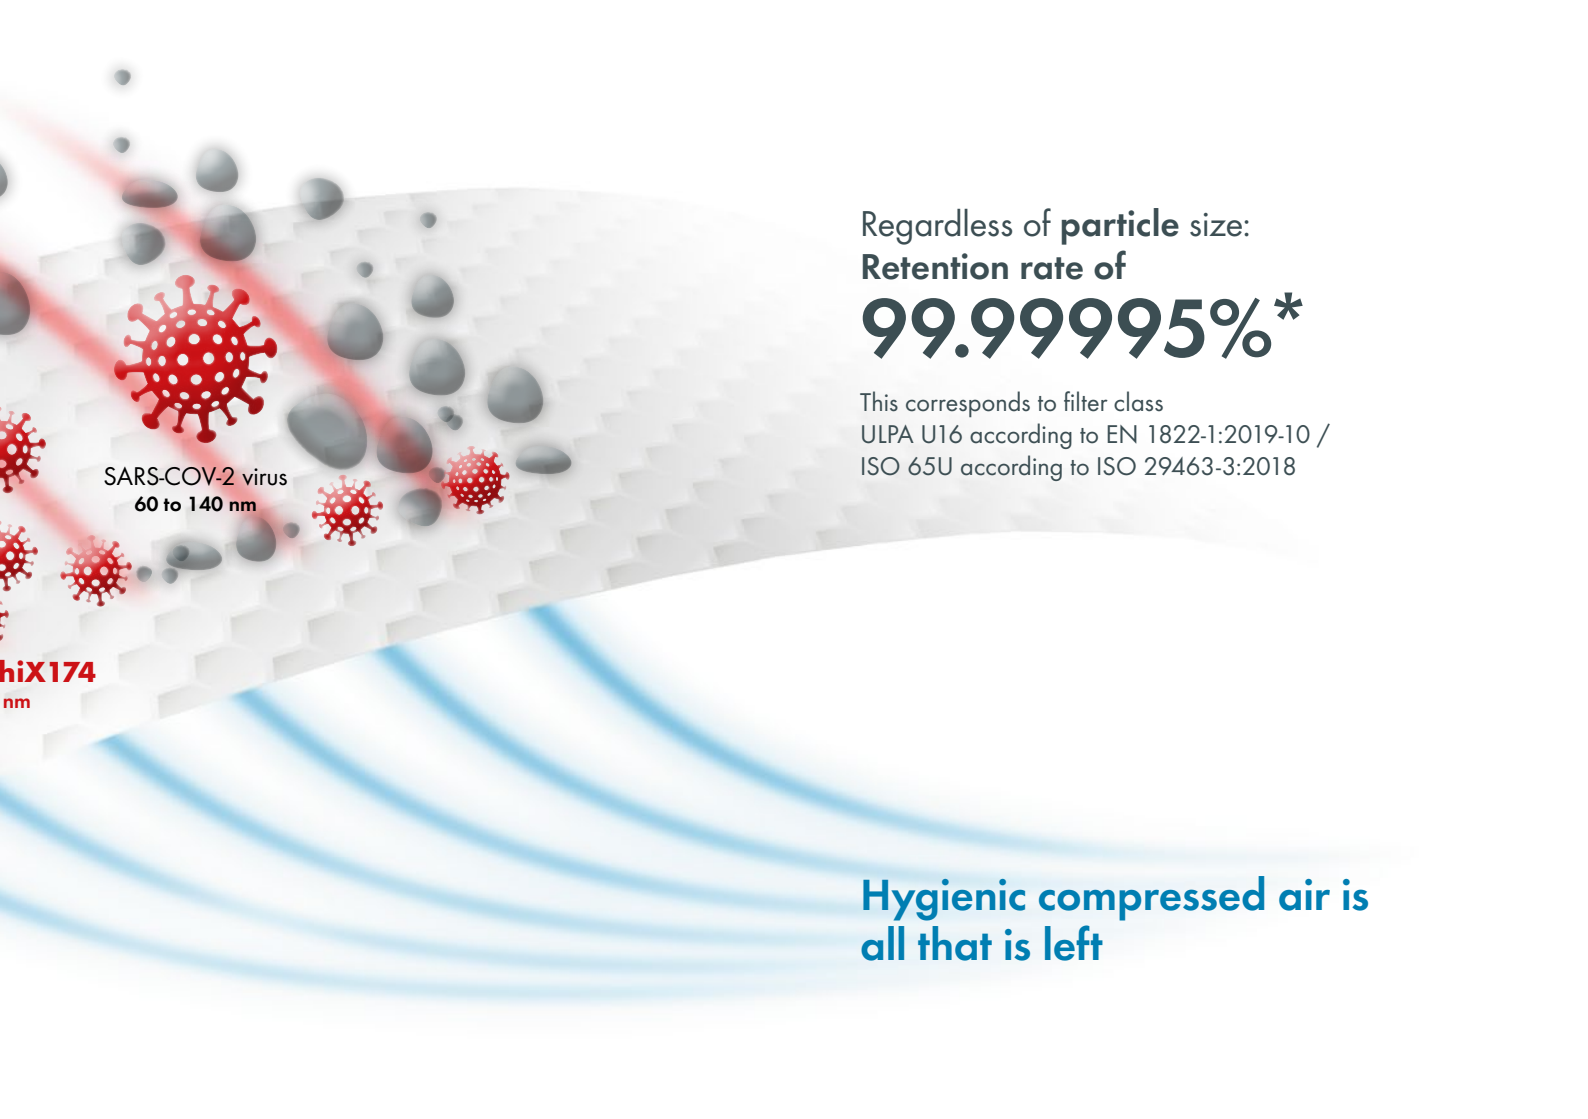

Risk of compressed air becoming  
contaminated with harmful particles  
and microorganisms

HIV  
100 to 120 nm

Influenza virus  
80 to 120 nm

TestvirusP  
25 to 30

\*Test results from 29.06.2020 recorded by the SGS Institut Fresenius GmbH.

SARS-COV-2 virus  
60 to 140 nm

hiX174  
nm

Regardless of **particle** size:

**Retention rate of**

**99.99995%\***

This corresponds to filter class

ULPA U16 according to EN 1822-1:2019-10 /

ISO 65U according to ISO 29463-3:2018

**Hygienic compressed air is  
all that is left**

# Contaminated compressed air is history!

## With the new virus-bacteria filter from Dürr Dental.

- ✓ Switch to a Dürr Dental virus-bacteria filter and benefit from hygienic compressed air with a single turn
- ✓ The virus-bacteria filter can be retrofitted on all Dürr Dental compressors with a membrane drying unit

- ✓ With the order of a filter set for your compressor you will save 10% of the price compared to the single filters

10%  
Price  
saving

- ✓ **NEW!**  
Included as standard on all Dürr Dental Silver Airline compressors since May 2020
